LIMS – Laboratory Integrated Management System.

Version 1.0 (Web – Based)

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabhnagar, Odhav,
Ahmedabad-382 415.**

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

1) LIMS

LIMS is a web-based solution for Materials testing laboratory. It helps run a laboratory starting from sample inward entry to sample preparation, testing, report generation, invoicing, dispatch, and ISO documentation. LIMS is an automation software for complete laboratory management.

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabh Nagar, Odhav,
Ahmedabad-382 415.**

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

2) Laboratory Workflow:

- a) A Sample/Samples are brought in by the customer or send through courier or collected by Porter or our staff.
- b) Front desk person will make a sample entry (A sample received acknowledgement will be send on WhatsApp, SMS, Email, D-Testo). Additionally, front desk person will print multiple number of inward letter copies depending on the number of tests to be performed.
- c) Senior Engineer will make a Review of request for the given sample and print a Cutting / Machining challan.
- d) Sample is sent for cutting / machining and if not required, directly to the concern department. Once the machining is done, make an acknowledgement into software to ensure department will test the given sample immediately.
- e) Once the sample is given to the department, department should immediately start the testing. If the testing is of prolonged period, an inward is to be done in raw data sheet form on software. Or directly into the reporting part. For people only responsible for the testing should provide the raw-data input on software for direct data fetching.
- f) Reporting can be sometimes done by the same person who is testing or sometimes by another person.
- g) Once the Reporting is done, it should be checked by HOD / Senior Person to make sure no mistake is done. (Report Review)
- h) Report is reviewed and approved by MD / TD / GM in digital form which will generate a digital signature on the report. (Report Approval)
- i) Accounts will review the cutting and machining challan and testing work done and generate a tax invoice. Invoice should be generated by itself, only cutting and machining entry is to be done manually and that to based on challans. No verbal data-based entry.
- j) For Walk in customer make a PI and send it to him, once the payment is done, accountant will make a payment entry and Tax Invoice will be generated automatically and send to the customer with the report soft copy.
- k) For Credit customer, report will be generated and dispatched immediately. Once the dispatch is done at the end of the month a consolidated bill will be send for over all work. Or May be weekly or based on total testing of 10000Rs or 50000Rs.
- l) The same can be managed by the D-Testo App too.
- m) Lastly as and when required, a digital copy is printed and send in courier if required and sample is returned if required. In few cases, if customer requires we can also print the report and sign it and then give a scan copy or send it by courier.

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabh Nagar, Odhav,
Ahmedabad-382 415.**

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

3) Main Page UI Architecture / UI Design

- a) User Interface should have a login page. (for e.g., <https://divine1.limsreport.in/>)
- b) Login should have a username and a password, assigned independently to all the staff members.
- c) Laboratory employee will input his username and password and it will show him his screen only with Information pertaining to him only. Possibly having a thumb print scan is also fun way of logging in.
- d) Different employee will have certain restrictions in terms of different modules and sub-modules.
- e) Main UI page will contain list of Notifications. Management will get all notification or choose from the notification. And different team will get different notification based on their duty / Notification Manager.
- f) Review of Request team will get notification for inward sample. Once they process the given sample, it will go away from the notification. Secondly, they can process it immediately from the notification itself. They can also generate a machining challan from the software
- g) Once the sample is machined and reaches back to the lab, an inward in software is to be made. Additionally, a notification for the pending sample machining should be also there.
- h) Different departments will get a list of pending test notifications. Concern person from the concern department should get notification only from the sample that is pending in his department.
- i) For test that are of long duration, only input of test duration is mandatory while starting the test, a separate list of pending long duration test should be made separate. It can be made common for all department. To avoid unnecessary confusion.
- j) Once the sample is tested, and if report made by the tester, it will be sent directly for review. For cases where the report is to be made by different person, Tester will upload the raw data into the software, and the report maker will make the report. The person who is making the report will get an update on the software in notification segment to make the report of this sample number because the raw data is uploaded.
- k) The Person who is reviewing the report from the department will get a Notification to review the report. He can review it from notification bar.
- l) The Person who is approving the report will get a notification for the list of approval of the report that are pending.
- m) Once the reports are approved in a group of report will be listed in the accountant's notification panel where there is multiple zones of notifications indicating PI pending, TI Pending, Payment pending etc. Once the payment input in system, the Tax Invoice will be generated automatically and you get an option over there, if the customer has asked for WhatsApp and email, a button pops up on Tax invoice to send it directly and if the customer has asked for hard copy. A print button should appear at the bottom of the Tax invoice for printing it directly.
- n) For D-Test user customer, once he gets a Proforma Invoice and once he makes a payment the proforma invoice gets converted to Tax invoice and uploaded automatically on the D-Testo and send to the customer over app only. Also additionally send it on mail + WhatsApp.

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabhnagar, Odhav,

4) Major Modules

➤ Customer
➤ Sample
➤ Sample Preparation
➤ Test / Result / Report
➤ Report Review & Approval
➤ Invoicing
➤ Report and Invoice Dispatch
➤ NABL ISO 17025
➤ Parameter Master
➤ Specification Master
➤ Statistics
➤ Administration
➤ LIMS User Manual

Major Modules which are required in a LIMS software.

- Customer Management Module:** This module deals with entry of customer and management of existing customers. Additionally, it sets classification of customer such as Walk-in Customer and Credit Customer. It also helps establish a verified database of the customer depending on industry classification. Eg Customer database from the foundry industry, Welding Industries, Pipeline Industry Etc.
- Sample Inward Module:** This module helps you manage new sample inward and manage a entire testing plan in this module. Senior authority can also review the test request from this module which helps deliver the exact requirement of the customer.
- Sample Preparation Module:** This module helps plan sample cutting / Machining as the test requirement. This module also helps generate a challan for the given test sample. The challan is also generated collectively for multiple samples at a time.
- Testing / Results / Reporting Module:** This module helps input raw data of the testing performed and it also helps input the results and generate report straight out of the raw data and results or data fetched from the machine.
- Report Review & Approval Module:** This module will help review the report generated and also approve after the report is reviewed by the Signing Authority.
- Invoicing Module:** This module is mostly automated based on the data input. In multiple cases the cost of the testing will be auto assigned. To avoid any manual intervention. Accounting should have the highest degree of automation. This module will only be used for checking the invoice and delivering the invoice to the customer and payment recovery only.
- Report and Invoice Dispatch Module:** This module is used for Report and invoice dispatch. Dispatch should be by means of courier, WhatsApp, email and in-person dispatch. This also helps generate sticker for courier dispatches.

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabh Nagar, Odhav,
Ahmedabad-382 415.**

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

- h) NABL ISO 17025 Module: This module maintains a complete paperwork for the NABL + It helps manage all the Records for NABL + It also keeps on reminding you about different NABL task that are to be executed. A flawless system for the execution of any NABL task and establish a flawless paperwork for all the audits.
- i) Parameter Master Module: This module maintains a list of all the parameters and its data's in organized manner. This holds list of the data. Eg List of instruments, List of employee, List of NABL Parameter, List of active parameters, List of passive parameters etc. Also it will have units of this parameters and alias of this parameters. It will be every basic parameter needed in the software to make it work in linkage with other parameters. Software should behave in a automation mode based on this parameter mapping and linkage. Eg, if you are selecting a test method, lets say it is a tensile test of TMT, and based on the TMT size the rates of the test are to be assigned. So the system will look at the parameter called nominal diameter of the TMT bar. This will help judge the testing charge for that given size of TMT size.
- j) Statistics Module: This module helps us generate statistical data based on our requirements. Eg generate a turnover value generated for a specific test or generate a turnover value for a specific department. etc
- k) Administration Module: This module will help control all the settings and the functioning of the LIMS software. Available to the Higher authorities only.

Phone number should have a +91 as auto assigned in a separate box, change it only when required and only allowed to input 10 numbers.

GST should be mandatory 15 Digits.

Monthly Billing customers should be allowed to dispatch report after Performa invoice is made. However, PI is not required to be send with the report, instead directly a automated Consolidated billing is send based on one month data compilation.

For given list, the tick box in front of the contact info represents permanent selection criteria. In multiple case you want the owner to always get the report / Tax Invoice. Also in multiple cases tax invoice should go to the accountant. In few cases no permanent contact is required, all the reports should go the person who is sending you the test request letter. Often you want to use same Email id for all correspondence, or use different courier address etc. There can be multiple case factors. The above module is to be designed to incorporate any given case.

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabhnagar, Odhav,
Ahmedabad-382 415.**

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com

2) Customer Master:

- This page consists of all the walk-in customer list / Credit Customer list. You can select the list from the top.
- Which will contain following parameter in tabular format. The parameters are Customer Name, Contact Name, Mobile No, Email Id, GST No., User id (One who makes this entry), Entry Date. Entry can be opened by clicking on it. This classification are decided based on following factors, 1) Credit limit assigned to that customer,
- Every Entry can be searched using following drop-down box selection, Customer name, Phone No, Email id, City, State, Type of Company.
- Normally walk in customer will not get Report until and unless he makes the payment. In special cases one can approve report page can send that report from that page. Just in special cases.
- Credit customers will get a credit period of a designated period. Eg credit based on month, credit based on amount of credit given, or Purchase order value.
- A separate sub module is given in the case where a purchase order is provided. This helps record a purchase order and keep a record of all the existing and expired purchase orders.

3) Verified / Unverified Customer Master:

- This sub module is a very important module to regulate the database. In a simplified way it helps avoid unnecessary duplications, it helps avoid a unregulated entry of customer database and it help create a super database for target audience marketing.
- Unverified Companies can be made verified only if following parameters are entered, Customer Type, Report/Invoice Dispatch Mode, Sample Return, Type of Company.
- Now let's assume you want a database of all the Sand Casting Foundry. You can filter type of Company and select Sand Casting Foundry. This will help you selectively market new testing / Special testing to such customers.
- There should be export to Excel data button at the top of the module. This will be a button to export database of the customer. This is a useful button for all the admin users. However, this is trap button for all the employees. This button when pressed by an employee a notification will go to the Lab owner and the LIMS company stating a breach of data has occurred. To avoid any fraudulent data theft by an existing employee.

Sample Additional Details: (Page 3)				
Case No: DMSPL-000001 (Auto Assigned)				
	Sample No.	24-000001	24-000002	List increases with number of samples
	Sample Details	(Autofill Sample Details data)	(Autofill Sample Details data)	List increases with number of samples
	Nature of Sample	TMT Bar	TMT Bar	TMT Bar
☐	Sample Identification			
☒	Heat No	(Autofill Sample identification data)	(Autofill Sample identification data)	List increases with number of samples
☐	Batch No			
☐	Size			
☐	(You can input multiple parameters)			

- This Module is used to input a purchase order and manage its features. Certain features are mandatory to input, and it should be saved for future orders. So when you input a customer name, his parameters will appear automatically.
- 4 type of identification numbers are provided, Case No: if 4 samples are entered in a system, it will assign one case no to 4 samples case, after that 4 independent lab no are given, eg 24-000001, 02, 03, 04. After that independent Report No and ULR number will also be auto assigned for each number of test selected Eg for 24-000001, you have to perform chemical, tensile and hardness the Report No will be 24-000001-0, 24-000001-1, 24-000001-2 and the ULR number will be: TC509824000000001F, TC509824000000002F, TC509824000000003F.
- TC5098 is the TC number – 24 is the year which will change to 25 in 2025 and 0 represents the location number of lab, which is 0 for us and last 8 digit is sample number + F represents full.
- After Page 3 you have option to save all the details, this will generate a entry. Then page 4 will open that is for Plan. Or you can view it in Inward List and make a plan.

Page 4 Plan: This page jumps straight to planning the tests for a given list of samples. You can go to plan in 2 ways, one directly after saving the details in page 3 and second by going to the inward list and selecting the details.

2) Inward List

	Case No	Customer Name	Sample No	Contact Person	Contact Name	Contact Email id	Collection Date	Collection Time	User Id	Date Modified
Plan										

Once you open the Inward list, it will give you list of samples, whose plan is still pending. When you click its plan button it will help you plan the test for each sample. This is mainly used in cases where sample arrives, but the letter is not available. So, the system will keep reminding the customer to send the letter.

- Following will be the plan master view to input new sample plan after the inward is done.
- Let's assume you have input 3 samples.

24-000003	32mm TMT Bar / Heat No 123456	IS 1786: 2018, Grade FE500	3. Spectro Full	4. ASTM E415: 2006	1
				Approve Plan	Edit

- After this, there will be next case. Once the case is approved, it moves to the Approved Plan list, where you only have the option to edit it. Also, after this process the case moves over to sample preparation, cutting / machining, and testing process. In the approval process if required there should be a option to bypass the approval process for plan. This will help in case speeding of process Is required but this may add to more errors in planning. A small review might add up to the time but ensures the smooth flow of the testing process.

4) Completed Plan

- This contains list of approved plan master that are tested and reporting also completed with review also done. List is same as approved plan master, just shifted here after completion. Also note that you cannot make any changes here. If any amendments are required, it must be done through the result portal only. This here is case only for sake of listing.
- Additionally, the cases that are disabled also moves in here. But it should have option to enable the case from here. Once you enable it, it moves back to the approval pending list for further amends as and when required when making back dated entries. This is only possible in 10 weekly DMSPL Entries done and disabled for back dated entries.

1) Cutting Charges

This sub module is used for entry of total cutting done on the sample before machining. And below this inward module there is a list of all the inward entries. These entries are classified in to 2 categories, On-going Test and Testing Completed. The entries shift from the On-going test to Testing Completed once the invoice has been generated. Entry can be edited until it is not shifted to Testing Completed. Once shifted to Testing Completed no more editing permitted to staff, for admin it is possible.

Cutting Charges

- 2 Ways to input a sample no. 1) by inputting a case no, and selecting all or you can select any 1 or 2 or 3 sample number and do a simultaneous entry or you can input individual sample numbers as many as you want and make a entry for them simultaneously.
- Type of material entry should be selected automatically based on the grade specified for that given sample number.
- Ther should be a option to amend the cuttings charges once the entry is performed. Possibly by clicking on the sample number.

2) Machining Challan

- This sub module helps input a machining carried out on a given sample no.
- This is done by clicking on sample no from the list which requires machining.

Plan Machining	Printed Challan	Print Challan		
☐ Case No:	DMSPL-004567			
Sample No:	Test	Test Method	Sample Preparation	Type of Material
☐ 24-000001	Tensile Test (Flat / Round)	ASTM A370	(Select from the dropdown box)	Stainless Steel
☐ 24-000002	Tensile Test (Flat / Round)	ASTM A370	(Select from the dropdown box)	Stainless Steel
☐ 24-000003	Tensile Test (Flat / Round)	ASTM A370	(Select from the dropdown box)	Stainless Steel
☐ 24-000004	Tensile Test (Flat / Round)	ASTM A370	(Select from the dropdown box)	Stainless Steel
☐ Case No:	DMSPL-004568			
Sample No:	Test	Test Method	Sample Preparation	Type of Material
☐ 24-000005	Tensile Test (Flat / Round)	IS 1608	(Select from the dropdown box)	Cast Iron
☐ 24-000006	Tensile Test (Flat / Round)	IS 1608	(Select from the dropdown box)	Cast Iron

- In this sub module you have a chance to select all case number and enter the specimen size or you can select each individual sample and print selected sample no. only. It is a choice of the operator.
- Once the sample is printed, the sample number is moved in to printed challan list.
- You have a option to reprint from the printed challan. In case re-machining is required.
- The case disappears from the list once a invoice is generated.

1) Raw Data Sheet

Raw Data Sheet				
Test Method				
IGC A262 (Practice A)			User ID & Time Stamp (shown only when printed)	
SSC Sulphide Stress Corrosion			User ID & Time Stamp (shown only when printed)	
G48 (Method A)			(Print Button)	
☐ Select All	Sample No		User Id	Time Stamp
☐	24-006311	Sub-Plan / Invoice Case		
☐	24-006312	Sub-Plan / Invoice Case		
☐	24-006313	Sub-Plan / Invoice Case		
☐	24-006314	Sub-Plan / Invoice Case		
☐	24-006286	Sub-Plan / Invoice Case		
☐	24-006287	Sub-Plan / Invoice Case		
☐	24-006288	Sub-Plan / Invoice Case		
Hardness Testing Multi Point			(Print Button)	
Hydrogen Induced Cracking			(Print Button)	
IGC A262 (Practice A)			(Print Button)	
☐	24-006290	IGC A262 (Practice A)		
☐	24-006291	IGC A262 (Practice A)		
☐	24-006291	IGC A262 (Practice A)		
Sub-Plan Pending List				

- For Some tests like hardness test, Impact test there will be sub-plan / Invoice case option of multi-location or single location or 3Pcs Impact / Multi Piece Impact, in that case sub-plan / Invoice Case is to be selected for those tests under raw data sheet. One can select all and Click on Sub-Plan and enter data simultaneously or select specifically 2 or 3 sample no and enter sub-plan for those 2-3 samples. Based on the sub plan the system will catch the invoice case and apply the rates. Purely based on the test type / no of samples / parameters values etc
- When we select test of IGC A262 (Practice A), its drop-down box will open with all the sample no selected simultaneously. Once you click on print, it will print all the raw data combined. After the print, User ID and

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,

Ahmedabad-382 415.**

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

Time Stamp will appear which indicates a print for these cases are already printed. Now new sample entry for IGC A262 PrA will be listed again as a new row. More and more samples will be kept on added as per the new entries made. This helps keep a bundle of sample print together.

- Once you print a case raw data sheet and click on the same case again, it will just show you list of all sample numbers but in unselected conditions, just in case if you want to print again a specific sample raw data sheet again only.
- Raw data sheet format will be different for different testing.
- Printing this raw data sheet indicates the test has started already and list moves to report pending. For long duration tests or even 24hrs test or 48hrs test, if you print the raw data sheet, it indicates the test has already started and it will go under notification of on-going long term test list and show as report pending only and only when time gets over. So, it won't show under test pending list anymore. This helps remove unnecessary clutter in test pending list.

2) Result Report

- This sub module is mainly used to make the reports for a given sample. This can be done instantly by fetching data from Spectro or from tensile testing software. One can also input time for long duration test and make data later on when testing is completed.
 - For entering the result and report data, if the test method is selected, it will give the report format automatically, if the test method is not selected, select it first. Based on the test and the test method the format of the data input + Connected formulas will be auto assigned
 - Once all the data input is completed and work done. Just save the report. After saving the data there are multiple flow options.
- 1) Save the report, team will verify it, Higher authority will approve it and the report will be dispatched by email and WhatsApp + D-Testo.
 - 2) Save the report and print it, higher authority will approve it after verification and then it will be re-scanned again. When re-scanned the customer will get it, also software will consider that case as verified and approved based on the QR scan in the pdf. After that soft copy is mailed + Whatsaap + D-testo. And the hard copy is courier if required.
 - 3) If customer wants courier, TC No are inward into the software, customer label is printed, and courier details are feed into software with the TC No that are inside that courier.
 - For all the different tests, there is a list of reporting format, and it may vary a bit depending on the method of testing used. This data cannot be listed here, it will given in hard copy format or in a separate document.

Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

1) Review Pending Report

This sub module is used to make review of the reports that are generated by the admin team. The process is very simple.

- 1) There will be 2 modes of the review report, one will be Case Pending list and Case Completed list. Case pending will have a list of report numbers listed under the sample no and Case No. This mode is mainly used in case of approval is required for approving case that is completed partially. Eg customer wants only chemical report urgently first. So the following will be the list of report completed showing under case pending because other tests on the given samples are still pending.

Eg:

Case No: DMSPL-000001	
Sample No: 24-000001	
☐ 24-000001-1	Review Button
☐ 24-000001-2	Review Button
☐ 24-000001-3	Review Button
☐ Sample No: 24-000002	
☐ 24-000002-1	Review Button
☐ 24-000002-2	Review Button

- 2) Once the person making the report prints on the save report. That reports will move to case pending. After all the testing associated with a given case number is completed report will move to case completed.
- 3) When you click Review button it will open the report + Inward letter + Customer letter. Approve button at bottom will send it for final approval and if any issue observed, click reject, this will prompt a text box for writing the reason of the rejection. And this list will appear in report pending list with different colour highlighting.

2) Approve Pending Report

This sub module is used to make approval of the reports that are reviewed by testing team. The process is very simple, same as reviewing only. However, no need to make a separate the case pending, and case completed. System should be user friendly and simple to approve.

3) Approved Report

This sub module holds all the test reports, and it also gives option to make amendments. Amendments are to be registered here with option to add mail images, or request letter or amendments request letter.

DIVINE METALLURGICAL SERVICES PVT. LTD.

Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

1) Quotation Module

This sub module helps manage quotations provided to the customer. This submodule has following options.

- 1) This helps open a email directly and provide a reply in form of quotation directly.
- 2) This sub module has option to make quotation in 4 ways, 1) Manually select each and every test from the list of tests. 2) Select a specific Product and it gives list of test quotation based on that product. 3) Customer Specific, eg Civil Project Customer or Gas Pipeline Customer. 4) Full Quotation.
- 3) This sub module will have a list of quotations that you have send previously and there should also be a option to submit a purchase order against a given quotations. The rates for the given case will also be saved, once a purchase order is input. Upon completing the testing, the rates assigned in the tax invoice / Proforma Invoice will also be as per the quotation enclosed and purchase order enclosed.
- 4) During selection of the tests, there should also be an option to input different rates for testing.
- 5) The mail management is to be done using an API module integration. Once the mail is sent during the negotiations, one should be able to amend the given quote and resend it and the new quote values should also be saved.

Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

2) Purchase Order Module

In many cases, there is a possibility, purchase order might come directly in courier or by some other means this sub module helps maintain a list of purchase orders and a account statement for a given customer. Also purchase order might be given for specific testing's only. This can be enter into the system here. There will be cases where you have a Quotation number and PO is made against that given Quotation number. There will be also options where the PO is made of specific tests. There will be a Open PO where the amount is locked and once the amount is crossed, you are not permitted to send report until payment is not done. Or new PO is not issued. This sub module will have old and new both the purchase orders.

Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

3) Invoicing Module

This sub module is a simple invoicing module that helps generate Tax Invoice / Proforma Invoice / Cash Entry. The system is to be made fully automated. There will be 3 segments, of this sub module

- 1) Proforma Invoice Pending
- 2) Proforma Invoice Generated
- 3) Tax Invoice Generated

The first segment will help you make a proforma invoice for any given case. Inside this segment there is also a button that says no tax invoice required. This will help make entry for cash cases. Here there should also be an option to send the payment portal with a Proforma invoice. If the payment is done by the customer on the net banking portal, and if the report is approved, the Tax Invoice + Inward Letter + Customer letter and the report will be dispatched automatically.

Once the Proforma invoice generated, it will be moved over to another segment that is Proforma Invoice Generated. Here the Case Entry will be given a separate identification, and it will be end for that case. For the normal transactions, once the customer makes the payment and that entry is made into the 2nd segment, the Proforma Invoice gets converted to the Tax Invoice and the Report + Tax Invoice gets dispatched by itself.

In the last segment, it is just the library of the tax invoices generated. Here there is also option to generate a tax invoice without any case. Note that the tax invoice generated here is inward into the tally. Also note that the tally is to be integrated by API form into software. No Manual Entry permitted anymore.

Entire accounts is classified in to 3 segment. 1) Temporary account, this consists of Debit and credit values of a given customer based on the total testing done but the invoice is not generated yet, this is used mainly for monthly billing customers whose values are added just for reference purpose only, eg if I assign 10000Rs as the limit for the given customer and during the total testing if unbilled total crosses 10K it stops the report. 2) Dummy Ledger, this ledger is used mainly to input cash entries that are executed without any billing. Only difference is no bill is made, however the software should have a full track record of total testing done and cash revenue generated in a day. Customers making a e-payment through a payment link for a given case just like Razor Pay for a given test report case should never be linked with dummy ledger. This ledger is for cash entries without GST cases only to maintain a incoming payment track records. 3) Lastly the main tally ledger for regular day to day activity. Real Question is how will we make a addition of all 3 ledgers? Because if you make entry for cash payment, it should not always go to the dummy ledger if a bill is required. Also how to transfer a credit entry from dummy ledger record to main tally ledger or a vice a versa case of transferring main tally ledger entry to the dummy tally ledger. Temp account is only to hold a debit value for a given customer for the total testing done, for which the PI or TI is not generated.

Case Decision:

- 1) Payment Pending / Credit Balance: (Dummy Ledger Debit - Credit) + (Tally Ledger Debit - Credit)

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabhnagar, Odhav,
Ahmedabad-382 415.**

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

- 2) Report dispatch allowed: (Temp Ledger Debit - Credit) + (Dummy Ledger Debit - Credit) + (Tally Ledger Debit - Credit) if ≤ 0
- 3) Report dispatch hold: (Temp Ledger Debit - Credit) + (Dummy Ledger Debit - Credit) + (Tally Ledger Debit - Credit) if ≥ 0

Case 1: Payment made in cash at front desk, entry goes into Dummy Ledger credit.

Case 2: Proforma Invoice that has option of No Tax Invoice Required selected, goes into Dummy Ledger Debit.

Case 3: Proforma Invoice that is generated goes into Temp Ledger Debit entry.

Case 4: Proforma Invoice, which gets converted to Tax Invoice, in this case the debit entry in the Temp ledger moves over to the Tally Ledger as debit entry.

Case 5: If customer makes a payment, the entry goes into Tally Ledger credit.

Case 6: Customer who are having old relationship, we can give them a credit of 10,000 or any specific amount. Irrespective of purchase order not received. This entry goes into temp ledger credit.

Case 7: If a customer makes a purchase order, entry goes into Temp Ledger Credit

Case 8: If a Proforma Invoice is made, for Purchase order customer there will be 2 debit entries in Temp Ledger. One to even out the purchase order and one which will be moved over to the Tally Ledger Entry.

Case 9: For every list of testing, there will be a temp PI generated, this will be a automatically generated PI which gets a separate entry in Temp Ledger as debit entry. This helps to ensure manage customer reporting is done smoothly in case of credit customers. If there is credit customer with a credit value of 10,000 and if the testing is done for 1 month but no PI made until that period. This temp PI helps give a idea, if we have crossed the limit of testing or not. Same for Purchase order customer, if PO value is of 1 Lakh and total testing exceeds 1 Lakh, reporting should be put up on hold.

Case 10: What if payment is done in cash and entry is done in Dummy Ledger, but a tax invoice is generated? This leads to credit entry in Dummy ledger and debit entry in Temp Ledger. This will require manual intervention.

There should be option to club multiple Temp Proforma Invoice and make one single Proforma Invoice which will be converted to Tax Invoice once the payment is made.

There should also be an option to make Tax Invoice directly from the Temp Proforma Invoice. However, in this case the payment will be shown as pending. Once received, there will be a need for separate payment entry. Once done, it will settle the balance inside the ledger.

4) Testing Rate Master

This sub module helps make entry for rates of different types of testing. The values may vary sometimes depending on different types of parameters. This Sub module can be shifted to Parameter master also if required.

5) Special Customer Rates

The data in this sub module will have a automated entry based on the Quotation Module and Purchase Order Module. However, if required one should be able to make a manual entry for all the testings. Also note that most of the quotes will not have all the test list, in this case such test should be assigned normal rates only.

6) F22 Purchase Order

This sub module is mainly used for making purchase orders for the equipment and consumables etc. and maintain a record of it. Plus, it can be send automatically using the email API integration. It also maintains a record of all the purchase orders.

7) Export to Tally

This sub module is not a mandatory module but the main purpose of it would be to export the complete data to tally.

8) Customer Ledger

This sub module will provide a total ledger for the given customer's name. This will show all 3 types of ledger. Staff can select the ledger that is required to be shared. There should also be an option to share this by email or WhatsApp or print it.

1) Report + Tax Invoice Dispatch

This list is divided into 2 sections, 1) Dispatch Pending and 2) Dispatch completed.

The pending list will have list of pending cases with following example about how to dispatch it.

Case No: DMSPL-000001	☐ Digital Report	☐ Tax Invoice	+ Scanned Document		
☐ Sample No: 24-000001					
☐ 24-000001-1					
☐ 24-000001-2					
☐ 24-000001-3					
☐ Sample No: 24-000002					
☐ 24-000002-1					
☐ 24-000002-2					
Dispatch Option:	☐ WhatsApp	☐ Mail	☐ D-Testo	☐ Courier	Send Button
Dispatch Record:	User ID	Dispatch Date	Dispatch Time		
WhatsApp:	Ronaksinh Parmar	01/03/2024	4:00:00 PM		
Mail:					
List of Mail ID to whom the mail was send to:					
1)					
2)					
3).....					
D-Testo	Ronaksinh Parmar	01/03/2024	4:00:00 PM		
Courier	Ronaksinh Parmar	01/03/2024	4:00:00 PM		
Courier Details:					+

If you have selected a courier option, it will print one sticker for dispatch. The + button in the below list will help add a dispatch detail, eg courier agency and the courier number. If you have selected a digital report option, it will also print the reports if courier is required.

The scanned button at the top is a option to manually add scan of a printed case and send it to the customer manually. This can be automated; however, it might have complications.

2) Courier / In-Person Dispatch

This sub module will have an option to scan just one QR code on a bunch of reports, that will list the full case number. After that you have option to select all or just few report numbers only. Also it has a option to select the tax invoice for that given case number. Once selected all the documents content of the courier, there is option to courier button or to dispatch in person button.

When you select courier button, it will print a courier label. For in-person dispatch option, input the person carrying the report and also note down, to whom the report was given to in that company.

1) Lab Employee Master

This sub module contains a list of existing employees and a list of Ex-Employees. The software will show a full list of employees as the basic user interface. Upon selecting any one of the names, it will show his full detail with multiple tab selection option on the top. The Tab will have following options.

- **Employee Detail:** This contains all the basic information's, such as Full name, DOB, Blood Group, Residential address, Permanent residential address, Mob No, Emergency mob no, email address, marital status, spouse name, father name, mother name, designation (To be selected from the drop-down box), Other Additional information, etc
- **Education Qualification:** This tab contains all the educational qualifications details.
- **Documents:** This tab contains attachments of all the documentations of a given employee, additionally it contains impartiality & Confidentiality agreements and any other agreements if any.
- **Employee Competence / Performance Report:** This contains quarterly / 6 Monthly performance reports of given employee, this can be technical, behavioural, and overall performance record.
- **Authorization:** This contains option to give specific authorization to a given person, eg, Report Verification authorization, Report approval authorization, Internal Audit authorization etc. Additionally, it also provides option to input a specific equipment authorization.
- **On Job Training & Evaluation Record:** This contains record of initial training and evaluation done for a specific equipment, process, test method etc.
- **User Management and Permissions:** This tab option helps set user management rights and login id and passwords. And option to let him/her access the software from anywhere or not.

2) Lab Scope Master

This sub module contains a list of parameters and their connected NABL range, and measurement of uncertainty for each parameter. This also includes a specific unit for a given parameter. The main user interface will consist of a test method and below the test method, it will include all parameters that are part of the given test method. Also, with the each given parameter it will show its lower limit, upper limit, with measurement of certainty calculation. The given test method (Data Drawn from Test Method Master) will have multiple tabs, Parameters, MOU, Verification (RM / CRM), Validation, PT/ILC record, LDM SOP, Test Method SOP, Retesting of Retained Samples. The details are as follow.

- **Parameters:** One of the examples is ASTM E415 Test method, will have list of elements as the parameters. The list consists of qualitative/quantitative selection option, LDM or standard test Method, with group and subgroup option with lower limit and upper limit for the given parameters and Measurement of uncertainty.

Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

- **MOU:** This consist of complete record for the measurement of uncertainty, calculations, raw data record for all the parameters.
- **Verification:** This consists of record for raw data of analysis of CRM and it is to be carried out at every specific interval with 5 to 10 number of records. Also note that here it will be only raw data.
- **Validation:** This is only applicable for the new test method and LDM test Methods.
- **PT/ILC Record:** This consist of records of PT/ILC records, only document is attached.
- **LDM SOP:** This consist of SOP writeup attached with the Test method. Usually, we have LDM for chemical department for the range of testing we have facilities, but standard does not permit, then we make lab developed method for that range.
- **Test Method SOP:** This consist of SOP writeup attached with the test method.
- **Retesting of Retained Samples:** This consist of record of retested samples. Interval to be set depending on the frequency of the test.

3) Lab Equipment Master

This is the total equipment master list with details such as Equipment name, Id, Department, OEM, Make, etc as listed in the approved parameter master. Upon selection of each equipment, there are multiple tabs.

- **Calibration:** This consists of the complete calibration record with the review of the calibration certificate.
- **AMC Schedule:** This consists of AMC records for the given equipment.
- **Equipment SOP:** This consists of equipment SOP in detail.
- **Intermediate check records:** This consists of intermediate check records for the given equipment. Can be done using CRM, so verification record can be used as the Intermediate check record and for some cases, one might need different method for intermediate check.
- **Equipment History card:** this is more like a record card with all the information about the equipment.

4) List of Reference Materials

- This involves all department reference materials records
- Chemical Spectro, ICP, Hardness, Microhardness CRMs.
- If any CRM is consumed that CRM will disable but maintained in the list
- All CRM record should be there.
 - CRM Name
 - CRM Procured from / Received from
 - CRM Parameters and its units

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabhnagar, Odhav,
Ahmedabad-382 415.**

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

- Equipment's it can be used on
- Date of Manufacturing of CRM / RM
- Quantity/Size Received / Consumption record.
- Tested / Certified By
- Validity
- Traceability etc

5) Supplier Master List

- This list contains a approved list of suppliers. It involves.
 - Supplier Name
 - Product/ service type, OEM, Chemical supplier, Calibration agency etc
 - Contact person.
 - Contact detail (Mob. No./ Mail ID)
 - Present status (Enlisted/ Delisted)

Format will be given in hard copy to you.

This list consists of multiple tabs such as Supplier registration form, Supplier confidentiality agreement, purchase order records, supplier yearly evaluation record. Detail can be found in the approved parameter master list.

6) Lab Designation Master

This master contains list of designation that will be assigned to the given employee. The list of Designation is as follows. One designation can be assigned to only one employee only. One Designation can be assigned multiple departments, E.g. Metallurgy Lab HOD can be assigned Metallurgy Department as well as Coatings & Thin-Film Division ([DMSPL Designation Master](#))

7) Lab Organization Chart

- Organization chart contains all the employee's education and position details.
- This chart details will automatically fetch from master list of employees based on the designation.
- For resigned employee this chart should be designed in such a way if we disable the employee from master list then that position will be removed from this chart.
- This format will be given to you in hard copy format.

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabhnagar, Odhav,
Ahmedabad-382 415.**

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

8) Quality Control Plan

- The Quality control plan has a list of activity required by the lab to be performed and that too at a specific interval. That are as follows. 1) Retesting of Retained Samples, 2) Replicate Test using different method, 3) Replicate Test using different Equipment, 4) Correlation of results for different characteristics of an item, 5) Testing of blind samples, 6) Use of check or working standards, 7) Control charts.

9) Staff Training Record

- This includes staff training plan, along with Training conducted and its attendance. This Training should also include training evaluation record and training effectiveness record.

10) Skill Matrix

- This format contains Skill matrix for all designation.
- Time interval will be set for record maintain of this document.
- Format will be given in hard copy to you.

11) Environmental Conditions & Monitoring Record

- Environment and humidity record for all department will be maintained here.
- Mechanical, Spectro chemical, ICP department will note down the temperature and humidity every day in this format and every month record will be saved in this format.
- Requirement for Temp. & humidity will differ for different department.
- Based on that this format will be made.
- Format will be given in hard copy to you.

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabh Nagar, Odhav,
Ahmedabad-382 415.**

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

12) Test Request Form

- This format contains only format for Test request form.
- Record will be saved in scanned format when sample inward is done.
- Format will be given in hard copy to you.

13) Master list of Internal & External Documents

- List of test method automatically fetch from the Master test method list in our format.
- If there is update in test method year or anything then this format will update automatic
- We will keep record for External origin documents in this format.
- External origin documents contain All guidelines of NABL 17025
 - Document Identification
 - Title
 - Requirement
 - Latest Issue No. /Rev. No.
 - Month/ Year of latest issue
- Format will be given in hard copy to you.

14) PT / ILC Plan

- This format will update annually.
- Plan will be uploaded here.
- This format we will provide in hard copy format.

15) Complaint Record

- Record for any complaint will be maintained here.
- No time limit sets for this format.
- This format will update and saved here.
- It involves Complaint, Details of complaint, what corrective action we take, Customer response.
- Format will be given in hard copy to you.

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabhnagar, Odhav,
Ahmedabad-382 415.**

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

16)Amendment Record

- This record consists of any amendment performed by the lab for any report. This should maintain following information. 1) Request for amendment in form of request form or any formal email, 2) Reason for amendment, 3) Initial TC and amended TC.

17)Risk & Opportunity

- It involves detailing of clauses under ISO 17025 according to that what is risk, opportunity for that risk, Rating, Action plan, effect of the action plan, Revise of risk rating will be defined.
- Only excel sheet will be uploaded here to keep record.

18)Customer Feedback Record

- We take feedback from our customer using two ways, personally and using the D-Testo App.
- This will be taken 4 times a year.
- This involves feedback based on rating of different points like, Quality we provide, Response to customer queries, Duration of test results, Complaint handling.
- Format will be given in hard copy to you.
- After we get feedback form from customers, feedback analysis should be done in a specific format.
- This will be linked to the feedback form.
- There will be weightage of each question and marks will calculate based on the rating.
- Overall satisfaction will come at the end after analysis, and this should be fulfilling our management system criteria (There is defined customer satisfaction acceptance criteria).
- Format will be given in hard copy to you.

19)Internal Audit

- This format will be available only when internal audit is scheduled.
- This involves all the clauses of ISO 17025 check plan and date, Auditor and auditee information.
- This format involves checklist of all clauses that are to be checked during assessment.
- This will update after internal audit is done according to schedule on the software. With all the documentary evidence enclosed. This will be linked to the internal audit clauses.
- After completing the internal audit record it is to be updated here, and a final report will be generated for the overall audit work.
- This should be done by internal auditor, under all clause any NC is raised or any observation for an improvement, this will be defined in this summary report and a corrective action also enclosed.

Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

20) Management Review Meeting

- This will be done after internal audit for management review meeting. A MRM meeting notice and agenda is planned.
- MRM to be conducted by Quality manager to discuss all the points that are observed in internal audit and review and take actions on those points.
- Discussion involves points like System procedure, Risk, corrective actions, Outcome of internal audit etc.
- This will be update when internal audit is done. And minutes of meeting is noted down.
- This involves the list of members present in MRM meeting and what points to be discussed, what actions needs to be taken, Target date to fulfil those points discussion.
- A MRM Outcome is also registered, this involves Output point, Decision, Action planned, who takes the responsibility.

- 1) Test Method Master: This list consists of test type, meaning the number of types of tests provided by the lab, can be listed here. This list helps in setting the test a customer has requested for testing. This list can be found in the approved parameter master list. It will consist following information, Rate of testing, Time required for the testing, Testing size required, sample preparation required, rate of sample preparation, Connected test methods with the test type. Connected Material Specification bound to this test method. Eg SS 316 is connected to the IGC A262 PrA and Lastly Equipment's connected to the given test.

Main UI of Test Method Master

Test Method	Test Method Subgroup	Lab Department	User Id	Modified Date
IGC Test	IGC A262 (Practice C) HNO3 Test (Austenite SS)	Corrosion Test	Ronaknp91	20/04/2024
Tensile Test	Tensile Test (Flat / Round)	Mechanical Department	Ronaknp91	20/04/2024
Tensile Test	Tensile Test (Pipe)	Mechanical Department	Ronaknp91	20/04/2024

Once you select a Tensile Test from the above list or add new entry it will open a detailed view as follow

Test Method	Tensile Test	Lab Department	Mechanical Department
Test Method Subgroup	Tensile Test (Flat / Round)		
Test Caption	Tensile Testing		
Sample Size	ø22mm X 350mm		
Testing Charges and Duration	Test Method and Sample Preparation	Materials Standard	Equipment

Once you select from the anyone of the above tab you open an additional menu

Testing Charges and Duration Tab

Fixed Rate	XXXX₹	Fixed Time Duration	X Days
Invoice Case	Rate	Time Duration	
Up to 600KN	200		
601KN to 1000KN	350		
Above 1000KN	500		
+ Add New			

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

Plot No. 14, Gopal Industrial Estate,
Opp. Vallabhnagar, Odhav,
Ahmedabad-382 415.

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

Note: If Invoice case is added, the fixed rate and fixed time duration gets locked. Otherwise test to consider values of fixed rate and fixed time duration for a given test.

Test Method and Sample Preparation Tab

+ Add New Test Method Standard		
Test Method Standard	ASTM A370	
+ Add Specimen

Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabhnagar, Odhav,
Ahmedabad-382 415.**

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

- 3) Customer Test Method Master: This list is similar to the Test Method master, only for the external customer, with some different test methods.
- 4) Customer Test Method Standard Master: This is also similar to the Test Method Standard Master, only the organization will not be there.

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabhnagar, Odhav,
Ahmedabad-382 415.**

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

5) Material Specification Master: This module requires a separate Writeup.

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabhnagar, Odhav,
Ahmedabad-382 415.**

Phone: 079-22891013, 09227220993
Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

- 6) Customer Material Specification Master: This specification master will be same as the regular specification master, the only difference is there is no standard organization.
- 7) Product Specification Master: The Product Specification master is a compilation of data for a desired product, Eg TMT Bar, IS 1786. Here do not enter any year, only the code is required. The complete detail can be found in the Approved Specification Master. It contains a list of tests involved in this product + what are different materials grade that fall under this product specification.
- 8) Specification Organization Master: This list contains only list of organization, Eg ASTM, ISO, BIS etc.
- 9) NABL Group Master: This list contains only list of NABL Group
- 10) NABL Subgroup Master: This list contains only list of NABL Subgroup
- 11) LAB Department Master: This Master contains list of different departments of the lab.
 - 1) Management
 - 2) Spectro Lab
 - 3) Mechanical Department
 - 4) Chemical Lab
 - 5) Metallurgy Department
 - 6) Corrosion Lab
 - 7) Coatings & Thin-Film Division
 - 8) Admin Department
- 12) Third Party Inspection Agency Master: This master list is for all the third party inspection agency, eg TUV, BV etc
- 13) Third Party Inspector Master: Just like the customer master, this list is of the third part inspector master. It helps assign someone to a case. Also what if there are more than 2-3 TPI assigned to one case?
- 14) Software Parameter Master: This list consists of all the parameter that is possibly present in this software, Eg, UTS, Hardness, Impact Strength etc with its unit. Also it is to be noted that the data will be connected to the Total Materia, hence it is important that the database somehow matches in its nomenclature with the total Materia nomenclature.
- 15) Unit Conversion Master: This master helps make conversion for the parameter Master, Eg KN/mm^2 can be converted to PSI, N/mm^2 , etc
- 16) Company Type Master (Category List, Aerospace, Defence, Fabricator)

DIVINE METALLURGICAL SERVICES PVT. LTD.

Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

- 17) Supplier Type Master: This type master helps classify the Supplier, eg Calibration Agency, OEM, Chemical Supplier. Note that the Supplier can be assigned more than one category.
- 18) Report Format Master (This contains formats for all the reports) (Optional)
- 19) Report Sub-Format Master (This contains report pattern, eg reporting of 2 samples together/ 3point hardness/ 1 point hardness/ multipoint hardness) (Optional)
- 20) Report Result Master (This contains standard parameters for the report such as temperature/ test speed/ loading rate etc) (Optional)
- 21) Formula Master (Optional)

Email: divinelab_nhp@rediffmail.com
Website: www.divinelaboratory.com

1) No of Samples per Department

This sub module helps analyse the number of samples that a department has received in a specific year/month etc + it also helps show the amount of revenue generated per every department for that specified period selected.

2) No of Tests per Test Method

This sub module helps track the number of tests performed for a specific test method, in a specific year/month etc + it also helps show the amount of revenue generated per every test method for that specified period selected.

3) Test Method time analysis

This sub module helps understand, the amount of time required for that specific test method. So it can help predict the department that lacks the speed for that specific test method.

4) Report Amendment statistics

This sub module helps understand the number of reports that require amendments. This statistic should be shown based on, Operator wise but in terms of %, eg if a operator makes 100 report but with 10 amendment means there is 10% amendment but for person making 500 reports, having only 10 amendment means only 2% report require amendment. Next is Customer wise, to keep a track of customer asking maximum amendments.

5) Customer wise revenue

This sub module helps make a list of customers and their yearly revenue generated. It can be full list of customers and an option to select the list of years you would like to see the data of.

6) Daily Statics

This sub module helps show following data

- 1) No of samples received in a day
- 2) No of tests requested in a day
- 3) No of tests planned in a day
- 4) No of tests completed in a day
- 5) No of test Report generated in a day
- 6) No of proforma Invoice generated in a day
- 7) No of tax Invoice generated in a day
- 8) Total cash revenue generated in a day

Problems section

What if one sample is tested and one is not tested, but customer wants the report for sample that is already tested.

What if for one sample, one test is done and one test is pending but the customer wants it urgently and you wish to share half the result.

What if you want to provide the Proforma invoice but testing is pending, how will you submit that?

Case where tester is X and Billing is to be done to Y company or vice versa.

Case where the customer wants to change the reporting to be done to after the test is completed.

How to cancel payment for the testing whose invoicing is not to be done. This is to be done by MD or TD only.

What if customer is using D-Testo but he is making the payment on the NEFT. There is no way we would know that the payment has come from this customer. So, we need to put a notification somewhere and ask them to inform us.

For uploading the data, a data should be generated automatically in a common drive folder, software should periodically keep on fetching the data automatically from a location. Once the data is uploaded, given sample from test pending notification area should be deleted automatically and moved over to the report pending list. + what if operator makes mistake while uploading the data

Give a path option, that helps you select whom to include and whom not to include in a path of cycle from sample receive to final report dispatch. Process Flow Setup.

Key to Metal Integrator API

For walk in customer list, there should be a option to make the tax invoice but keep payment as pending check box in case if customer is asking tax invoice for payment. And is insisting that he will make the payment only and only if we submit the tax invoice. In this case tick the payment pending box so he will be shown as payment pending list inside the notification area.

Case where you want to report multiple samples on one report.

Case where you want to report multiple tests on one report.

Case where you want to report same test data but in different way. Eg hardness for 10-12 point, vs hardness with average of 3.

Payment inward would not be in same amount as the Proforma invoice value. It can be round figured or some another figure. Eg PI was 500Rs and customer paid 5000Rs advance.

Tally Integration API

Dispatch System: For every new entry, there is a inward letter with a barcode. After the report is ready, you need to print an envelop sticker by scanning the barcode. Person will stick it on the cover. After that the Courier agency will stick his barcode on the cover. Scan courier details in software to scan the courier barcode. After dispatch whatsapp + Mail goes to the sender. + it will also contain details about which reports are included and which reports are not included in that courier.

During courier dispatch, scan the QR code on the number of reports included in that courier additionally add the address from the sticker, print directly from the software and dispatch data should be stored in the software.

Every Report scanning should be fetched by QR or Barcode and should be uploaded to system, every detail like scanning report + Tax Invoice + inward letter + Customer letter should be mailed.

There should be quotation module. For sending a mail and AI helping you remembering old quote and follow up task.

TPI planning Module. For planning TPI activity and planning a new

For Customer, dedicated to his case, software generates a QR code for payment, eg 790Rs QR is generated and once that is done, a QR is send to his WhatsApp number and software registers it and once a payment is done, software will get a intimation and make a registration for that payment in the software and release the report.

We need to find a way to design a specification parameter master in such a way that, if you input the speciation eg SS 316, the test method for same can be implemented by itself for all the elements.

DIVINE METALLURGICAL SERVICES PVT. LTD.

Testing House of Metals & Alloys
Accredited By NABL - ISO 17025

**Plot No. 14, Gopal Industrial Estate,
Opp. Vallabh Nagar, Odhav,
Ahmedabad-382 415.**

In result inward for chemical, if not in range of NABL, highlight red and if not in range of given specification highlight yellow.

We need a Parameter cross reference for Standard / Grade / Material Specification eg LAS / CS / SS / etc / Tensile Test Method or sample preparation test method / Size options etc. This will help select the correct machining size options.

Should we add a Dynamic parameter option in Sample Machining challan. Eg for Bolt where 25% reduction is required, size of tensile specimen is made based on the M24 or M20 sizing.

What if advance paid in cash, and entry is to be made in LIMS. Make sure this entry does not goes in to regular tally entry. It should go in to special account and if you make total of testing done. Deduction should be done against that special account credited amount. A provision will also be required in the case of converting a black entry to a legal tally entry. And a legal entry to a black entry.

Accounts should be designed in such a way that, it should have option to make invoice in 2-3 ways, additionally cases are to be provided for invoicing instantly, black invoicing, Invoicing accumulated for weekly, monthly, based on testing amount. Eg testing done for 10000Rs. Now make a bill. Also cases where PI is required first and then TI. OR TI is required directly but payment is not done. Accounts is much more complex.

If our staff member is taking in the report with him for the delivery, some sort of acknowledgement is required in the software to confirm who has delivered it.

3 modules are the most complicated of all, 1) Reporting results module, 2) Material Specification Master Module, 3) NABL Module.

Specification master should have option to add tolerances, and it is to be written in a note. Secondly parameters of specification should have an option to add sub parameters. Eg Impact @RT, 0 degree, -40 degree, -196 degree etc. UTS @ RT, 100-degree, 250 degree etc.

Additionally we need to connect a test to its parameters somehow.
